Existing club member segment at higher risk of lapsing

While Apathetic Clubbers can be found within all age groups, there is a significantly higher proportion of teenagers to be found in this segment. They don’t like competition, tend to view sports as a ‘chore’ and feel a pressure that you need to be good at sport to be part of a club.

Despite being highly active in both sport and physical recreation, the Apathetic Clubber is less likely than other club member segments to feel very positive toward sport or clubs. Relative to other club member segments they tend to find value in clubs for their ‘facilities’ and that it encourages you to do exercise, rather than the elements of competitiveness and socialising.

While they initially enjoyed their membership, this appears to be waning. Some feel a pressure that you need to be good at sport to be part of a club.

This segment would benefit from feeling less pressured to be good at the sport to continue enjoying it.

There needs to be a focus on ease of ‘entry’ in terms of ensuring everyone feels they can join / participate regardless of skill level or motivation.

There may be a need to promote the social and fun aspects of clubs to reinvigorate this segment who are at risk of dropping out if there is a change to their circumstances given their somewhat apathetic attitude.

- This segment need to be reminded of the positive aspects of club membership including how they used to enjoy the sport and how it is a way to keep fit and healthy while having some fun.
- A key element is to ensure everyone feels they can join / feel comfortable in the club regardless of skill level.
