PARTICIPATION IN GYMNASTICS BY AUSTRALIAN CHILDREN 2003 – 2012

Report prepared by the Australian Sports Commission
This report presents data from the *Children’s Participation in Cultural & Leisure Activities Survey (CPCLAS)* which was administered by the Australian Bureau of Statistics (ABS) in 2003, 2006, 2009 and 2012.

The *CPCLAS* collected information about participation in *organised sport outside of school hours* for Australian 5-14 year olds as recalled by their parents.

More details on the *CPCLAS* can be found via ABS cat. no. 4901.0 or the following link: [http://www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/4901.0Main+Features1Apr%202012?OpenDocument](http://www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/4901.0Main+Features1Apr%202012?OpenDocument)

This report has been prepared by the Australian Sports Commission (ASC) and includes some data that has not been presented in previous ABS *CPCLAS* publications. The ASC purchased custom data for select sports through the ABS Sports Unit.
The Children’s Participation in Cultural & Leisure Activities Survey asked parents:

Which sports has [Child name] played or trained for outside of school hours since this time last year?

In each year the survey was administered, a number of parents responded:

Gymnastics
Explanatory notes for interpreting the Children’s Participation Data

Data from the **CPCLAS** should not be directly compared with results from other sport participation surveys, such as the *Exercise Recreation And Sport Survey (ERASS)* or the *ABS adult sport participation surveys*, without considering the difference in methodology, scope and years.

It should be noted that the **CPCLAS** data:
- Is based upon a different data collection process to the ERASS adults’ data
- Is not collected in the same years as the ERASS and ABS adults’ data
- Reflects parent responses, while the ERASS and ABS adults’ data reflects participant responses
- Reflects participation outside of school hours only, while the ERASS and ABS adults’ data also included measures of total participation
- Reflects organised participation only, while information on non-organised participation data was also collected for the ERASS and ABS adults
- Reports different participation frequency categories to the ERASS adults data (e.g. Regular participation for the children’s data is defined as 27 times or more a year, while for the adults data is defined as 26 times or more a year)
Some of the data in this report has not been publically released by the ABS. The ASC sourced custom data tables from the ABS containing information relevant for sports. Please note that the ASC did not have access to the raw data. As the ABS reported the total survey sample size (sample size in 2003 = 8,900; sample size in 2006 = 8,682; sample size in 2009 = 5,825; sample size in 2012 = 7,300), it was possible to compare the proportion of Australian children participating in a sport across the four time periods with significance testing. The ABS, however, did not report the sample sizes for the demographic (e.g. age or gender) categories, so it was not possible to conduct significance tests on demographic subgroups. As such, the interpretation of data relating to the demographic subgroups in this report is indicative only.

The ABS does not publically release data with high Relative Standard Errors (RSEs). It is important to note that all the gymnastics data presented in this report were associated with acceptable RSEs. For further information* related to RSEs associated with the data please refer to ABS cat. no. 4901.0.

Please note that scales may differ between charts.

Australian children’s population (5–14 year olds) by year from ABS population estimates:

- 2003: 2,647,500
- 2006: 2,664,700
- 2009: 2,722,500
- 2012: 2,786,100

Participation frequency definitions:
- Annual defined as participating in a given sport at least once a year
- Regular defined as participating in a given sport at least 27 times a year
- Non-regular defined as participating in a given sport at least once but less than 27 times a year

*http://www.abs.gov.au/AUSSTATS/abs@.nsf/Latestproducts/4901.0Technical%20Note1Apr%202012?opendocument&tabname=Notes&prodno=4901.0&issue=Apr%202012&num=&view=
Summary of Trends
Summary of General Trends in Children’s Participation Among 21 Selected Sports

Between 2003 and 2012 there was a significant increase in children’s organised participation in the following sports:

• *Gymnastics* and *rugby union* had a significant increase in annual, regular and non-regular participation rates.
• *Rugby union* had a significant increase in annual and non-regular participation rates.
• *Touch football* and *football* had a significant increase in the non-regular participation rate.

Between 2003 and 2012 there was a significant decrease in children’s organised participation in the following sports:

• *Hockey* had a significant decrease in annual, regular and non-regular participation rates.
• *Netball, tennis* and *softball* had a significant decrease in annual and regular participation rates.
• *Athletics* had a significant decrease in the annual participation rate.
• *Cricket, touch football* and *golf* had a significant decrease in the regular participation rate.

For information on general trends in children’s organised participation across sports please refer to the following ABS reports:

Summary of General Trends in Children’s Gymnastics Participation

Organised gymnastics participation
Between 2003 and 2012:
• The ABS estimation of the number of children annually participating in organised gymnastics varied around 92,000 (in 2003) and 135,000 (in 2012).
• The ABS estimation of the percentage of Australian children annually participating in organised gymnastics varied between 3.5% (in 2003 and 2006) and 4.8% (in 2012).
• There was a significant increase in the annual, regular and non-regular participation rates for children’s organised gymnastics.

Comparison of regular v. non-regular organised gymnastics participation
For all four time periods, the regular participation rate for children’s organised gymnastics was statistically significantly higher than the non-regular participation rate.

Demographic analysis of organised gymnastics participation
More girls than boys participated in organised gymnastics at least once a year. For annual organised gymnastics participation, the proportion of girls to boys increased over the years.

The annual participation rate for organised gymnastics decreased with age. Across all four time periods the annual participation rate was highest for 5-8 year olds and lowest for 12-14 year olds. Between 2003 and 2012 over half of annual organised gymnastics participants were estimated to be 5-8 years of age.
Organised* Participation in Gymnastics

* The CPCLAS refers to "organised sport" as a sport which is played or trained for outside of school hours and is organised by a school, club or association
Current Participation Status (2012)

Interpretive Notes

• 4.8% of the Australian children’s population participated in organised gymnastics at least once in 2012.
• Australian children were statistically significantly more likely to participate regularly in organised gymnastics (63.3%) than non-regularly (36.7%).
• The vast majority of annual organised gymnastics participants were girls (81.6%).*
• A small majority of annual organised gymnastics participants were aged 5-8 years (56.0%).*

Annual Participation**

- Gymnastics participants, 4.8%
- Non-Gymnastics participants, 95.2%

Frequency

- Regular, 63.3%
- Non-regular, 36.7%

Gender

- Boys, 18.4%
- Girls, 81.6%

Age

- 12-14 year olds, 15.8%
- 9-11 year olds, 28.2%
- 5-8 year olds, 56.0%

*As the ABS did not report the survey sample sizes for the demographic (e.g. age or gender) categories it was not possible to conduct a significance test on the demographic subgroups

**Based on the 2012 ABS population estimate for Australian 5-14 year olds

A one sample Difference in Proportions T-Test at 95% confidence level was used to compare regular and non-regular participation rates
2003 – 2012 Participation by Frequency

**Children’s Participation Rate**

<td>3.1%</td>
<td>1.5%</td>
</tr>
<tr>
<td>2012</td>
<td>4.8%</td>
<td>3.1%</td>
<td>1.7%</td>
</tr>
</tbody>
</table>

**Proportion of Participants by Frequency**

- **2003**: 66.0% Regular, 34.0% Non-regular
- **2006**: 67.9% Regular, 32.1% Non-regular
- **2009**: 66.6% Regular, 33.4% Non-regular
- **2012**: 63.3% Regular, 36.7% Non-regular

**Interpretive Notes**

Between 2003 and 2012, the ABS estimation of the number of children annually participating in organised gymnastics varied around 92,000 (in 2003) and 135,000 (in 2012).

Between 2003 and 2012, the ABS estimation of the percentage of Australian children annually participating in organised gymnastics varied between 3.5% (in 2003 and 2006) and 4.8% (in 2012).

Between 2003 and 2012, there was a significant increase in the annual, regular and non-regular participation rates for children’s organised gymnastics.

For all four time periods, the regular participation rate for children’s organised gymnastics was statistically significantly higher than the non-regular participation rate.

**Note**: A two sample Difference in Proportions T-Test at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating across the four time periods. A one sample Difference in Proportions T-Test at 95% confidence level was used to compare regular and non-regular participation rates.
Annual Participation
Demographic Analysis
The data presented on this slide appears to indicate the following:

- More girls than boys participated in organised gymnastics at least once a year.
- For annual organised gymnastics participation, the proportion of girls to boys increased over the years. The highest proportion of girls to boys was in 2012.
- The number of girls participating in organised gymnastics increased from 2003 to 2012 whereas the number of boys remained relatively constant over this time frame.
The data presented on this slide appears to indicate the following:

- The annual participation rate for organised gymnastics decreased with age. The highest estimated annual participation rate were for 5-8 year olds, while the lowest estimated annual participation rates were for 12-14 year olds.

- From 2003 to 2012 over half of annual organised gymnastics participants were 5-8 years of age.
Regular Participation
Demographic Analysis
Interpretive Notes

The data presented on this slide appears to indicate the following:

- More girls than boys participated regularly in organised gymnastics.
- Like the annual participation analysis, over the four time periods the ABS estimated that more than three quarters of regular participants in organised gymnastics were girls.
- The rate and number of girls and boys participating regularly in organised gymnastics followed a similar pattern to annual participation. Girls participation increased from 2003 to 2012 whereas boys participation was relatively consistent.
### Regular Participation by Age

#### 1. Regular Participation Rate by Age

- **5-8 year olds**
  - 2003: 0.9%
  - 2006: 0.8%
  - 2009: 1.5%
  - 2012: 1.7%

- **9-11 year olds**
  - 2003: 3.3%
  - 2006: 3.5%
  - 2009: 3.9%
  - 2012: 3.3%

- **12-14 year olds**
  - 2003: 24%
  - 2006: 24%
  - 2009: 42%
  - 2012: 3.3%

#### 2. Proportion of Regular Participants by Age

<table>
<thead>
<tr>
<th>Year</th>
<th>5-8 year olds</th>
<th>9-11 year olds</th>
<th>12-14 year olds</th>
</tr>
</thead>
<tbody>
<tr>
<td>2003</td>
<td>56.2%</td>
<td>31.9%</td>
<td>11.9%</td>
</tr>
<tr>
<td>2006</td>
<td>58.0%</td>
<td>31.2%</td>
<td>14.5%</td>

<tr>
<td>2009</td>
<td>45.0%</td>
<td>40.4%</td>
<td>11.0%</td>
</tr>
<tr>
<td>2012</td>
<td>51.4%</td>
<td>32.4%</td>
<td>16.2%</td>
</tr>
</tbody>
</table>

#### 3. Number of Regular Participants by Age

<table>
<thead>
<tr>
<th>Year</th>
<th>5-8 year olds</th>
<th>9-11 year olds</th>
<th>12-14 year olds</th>
</tr>
</thead>
<tbody>
<tr>
<td>2003</td>
<td>34</td>
<td>19</td>
<td>7</td>
</tr>
<tr>
<td>2006</td>
<td>36</td>
<td>19</td>
<td>7</td>
</tr>
<tr>
<td>2009</td>
<td>38</td>
<td>34</td>
<td>12</td>
</tr>
<tr>
<td>2012</td>
<td>44</td>
<td>28</td>
<td>14</td>
</tr>
</tbody>
</table>

#### Interpretive Notes

The data presented on this slide appears to indicate the following:

- **12-14 year olds** were estimated to have the lowest regular organised gymnastics participation rate.

- Compared with the annual participation analysis, there was a lower proportion of regular organised gymnastics participants who were aged 5-8 years.

The Table represents a ranking of 21 selected sports
Table sorted on 2012 rankings
#1 ranking = sport with the highest participation among the 21 selected sports

ausport.gov.au
In 2012 sports with regular organised participation rates statistically significantly higher than non-regular organised participation rates were swimming, football, netball, basketball, tennis, gymnastics, rugby league, horse activities and baseball.

In 2012 sports with non-regular organised participation rates statistically significantly higher than regular organised participation rates were cricket, athletics, touch football, surf lifesaving and golf.

Note: A one sample Difference in Proportions T-Test at 95% confidence level was used to compare regular and non-regular participation rates.
Between 2003 and 2012 there was a statistically significant increase in children annually participating in organised gymnastics, rugby league and rugby union. In this same period there was a statistically significant decrease in children annually participating in organised netball, tennis, athletics, hockey and softball.

Note: A two sample Difference in Proportions T-Tests at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating in 2003 and 2012.
Between 2003 and 2012 there was a significant increase in children regularly participating in organised gymnastics and rugby union.

In this same period there was a significant decrease in children regularly participating in organised netball, tennis, cricket, hockey, softball, touch football and golf.

Note: A two sample Difference in Proportions T-Tests at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating in 2003 and 2012.
2003 v. 2012 Non-regular Participation Rates for Selected Sports

Between 2003 and 2012 there was a significant increase in children non-regularly participating in organised football, gymnastics, touch football, rugby league and rugby union.

In this same period there was a significant decrease in children non-regularly participating in organised hockey.

Note: A two sample Difference in Proportions T-Tests at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating in 2003 and 2012.
