PARTICIPATION IN CRICKET BY AUSTRALIAN CHILDREN 2003 – 2012

Report prepared by the Australian Sports Commission

Participation Data for Australian Children 5-14 Year Olds

This report presents data from the ***Children's Participation in Cultural & Leisure Activities Survey (CPCLAS)*** which was administered by the Australian Bureau of Statistics (ABS) in 2003, 2006, 2009 and 2012.

The ***CPCLAS*** collected information about participation in *organised sport outside of school hours* for Australian 5-14 year olds as recalled by their parents.

More details on the ***CPCLAS*** can be found via ABS cat. no. 4901.0 or the following link:

<http://www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/4901.0Main+Features1Apr%202012?OpenDocument>

This report has been prepared by the Australian Sports Commission (ASC) and includes some data that has not been presented in previous ABS ***CPCLAS*** publications. The ASC purchased custom data for select sports through the ABS Sports Unit.

The Children's Participation in Cultural & Leisure Activities Survey

The *Children's Participation in Cultural & Leisure Activities Survey* asked parents:

Which sports has [Child name] played or trained for outside of school hours since this time last year?

In each year the survey was administered, a number of parents responded:

*Cricket**

* In this report the definition of cricket participation includes indoor and/or outdoor cricket.

Explanatory notes for interpreting the Children's Participation Data

Data from the **CPCLAS** should not be directly compared with results from other sport participation surveys, such as the **Exercise Recreation And Sport Survey (ERASS)** or the **ABS adult sport participation surveys**, without considering the difference in methodology, scope and years.

It should be noted that the **CPCLAS** data:

- Is based upon a different data collection process to the ERASS adults' data
- Is not collected in the same years as the ERASS and ABS adults' data
- Reflects parent responses, while the ERASS and ABS adults' data reflects participant responses
- Reflects participation outside of school hours only, while the ERASS and ABS adults' data also included measures of total participation
- Reflects organised participation only, while information on non-organised participation data was also collected for the ERASS and ABS adults
- Reports different participation frequency categories to the ERASS adults data (e.g. Regular participation for the children's data is defined as 27 times or more a year, while for the adults data is defined as 26 times or more a year)

How to interpret the Children's Participation Data

Some of the data in this report has not been publically released by the ABS. The ASC sourced custom data tables from the ABS containing information relevant for sports. Please note that the ASC did not have access to the raw data. As the ABS reported the total survey sample size (sample size in 2003 = 8,900; sample size in 2006 = 8,682; sample size in 2009 = 5,825; sample size in 2012 = 7,300), it was possible to compare the proportion of Australian children participating in a sport across the four time periods with significance testing. The ABS, however, did not report the sample sizes for the demographic (e.g. age or gender) categories, so it was not possible to conduct significance tests on demographic subgroups. As such, the interpretation of data relating to the demographic subgroups in this report is indicative only.

The ABS does not publically release data with high Relative Standard Errors (RSEs). It is important to note that the girls cricket participation data was associated with high (25% – 50%) RSEs and therefore should be interpreted with caution. For further information* related to RSEs associated with the data please refer to ABS cat. no. 4901.0.

Please note that scales may differ between charts.

Australian children's population (5–14 year olds) by year from ABS population estimates:

2003: 2,647,500	2006: 2,664,700
2009: 2,722,500	2012: 2,786,100

Participation frequency definitions:

- Annual defined as participating in a given sport at least once a year
- Regular defined as participating in a given sport at least 27 times a year
- Non-regular defined as participating in a given sport at least once but less than 27 times a year

*<http://www.abs.gov.au/AUSSTATS/abs@.nsf/Latestproducts/4901.0Technical%20Note1Apr%202012?opendocument&tabname=Notes&prodno=4901.0&issue=Apr%202012&num=&view=>

Summary of Trends

Summary of General Trends in Children's Participation Among 21 Selected Sports

Between 2003 and 2012 there was a significant increase in children's organised participation in the following sports:

- *Gymnastics* and *rugby union* had a significant increase in annual, regular and non-regular participation rates.
- *Rugby union* had a significant increase in annual and non-regular participation rates.
- *Touch football* and *football* had a significant increase in the non-regular participation rate.

Between 2003 and 2012 there was a significant decrease in children's organised participation in the following sports:

- *Hockey* had a significant decrease in annual, regular and non-regular participation rates.
- *Netball*, *tennis* and *softball* had a significant decrease in annual and regular participation rates.
- *Athletics* had a significant decrease in the annual participation rate.
- *Cricket*, *touch football* and *golf* had a significant decrease in the regular participation rate.

For information on general trends in children's organised participation across sports please refer to the following ABS reports:

Summary of General Trends in Children's Cricket Participation

Organised cricket participation

Between 2003 and 2012:

- The ABS estimation of the number of children annually participating in organised cricket varied around 133,000 (in 2012) and 155,000 (in 2009).
- The ABS estimation of the percentage of Australian children annually participating in organised cricket varied between 4.8% (in 2012) and 5.8% (in 2006).
- There was a significant decrease in the regular participation rate for children's organised cricket. There was, however, no significant change in the annual and non-regular participation rates.

Comparison of regular v. non-regular organised cricket participation

In 2003 and 2006 the regular participation rate for children's organised cricket was estimated to be higher than the non-regular participation rate. In contrast, in 2009 and 2012 the non-regular participation rate was estimated to be higher than the regular participation rate.

Demographic analysis of organised cricket participation

More boys than girls participated annually and regularly in organised cricket.

The majority of children participating in organised cricket were aged 9 years or older. The age demographic for regular participants in organised cricket was older than the age demographic for annual participants.

Organised* Participation in Cricket^

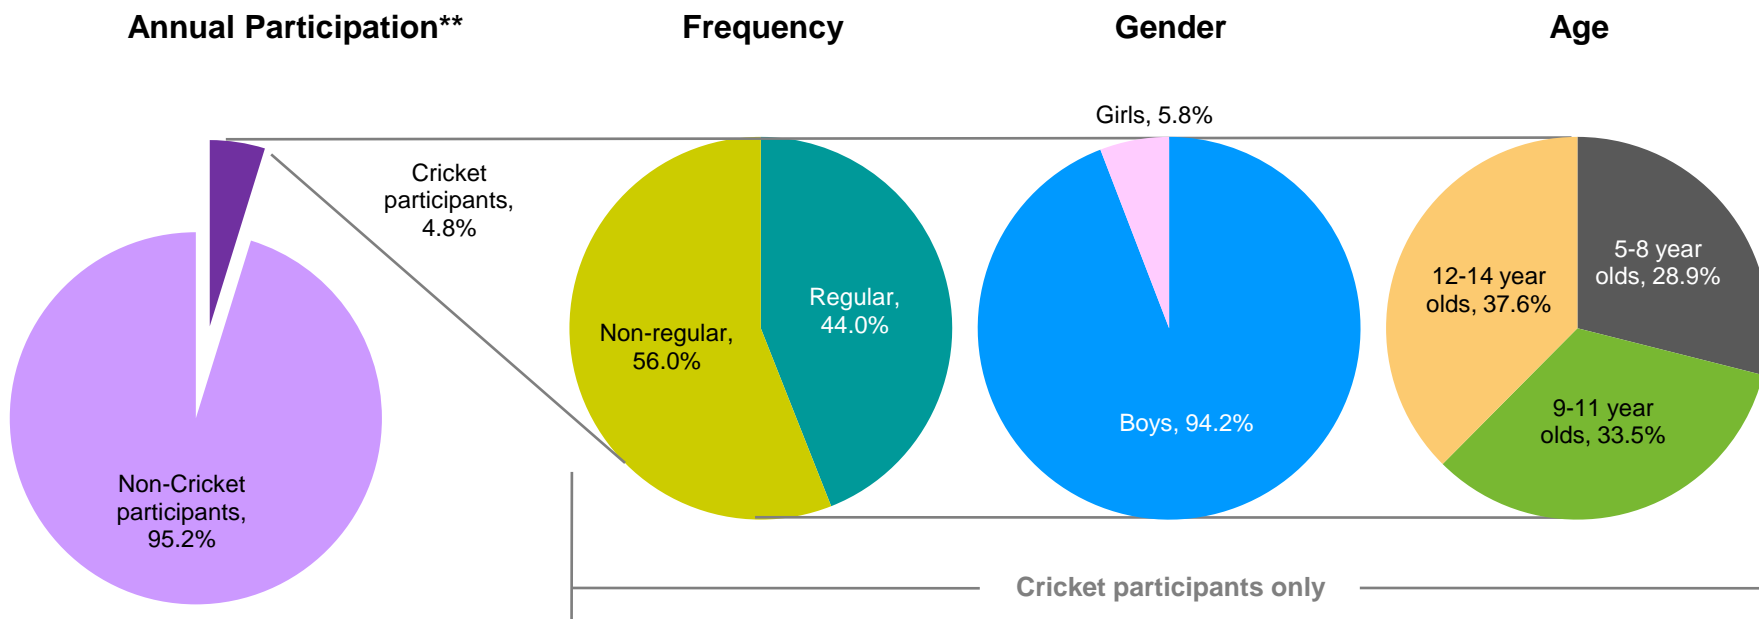

* The CPCLAS refers to "organised sport" as a sport which is played or trained for outside of school hours and is organised by a school, club or association

^ Includes indoor and outdoor cricket.

Current Participation Status (2012)

Interpretive Notes

- 4.8% of the Australian children's population participated in organised cricket at least once in 2012.
- A small majority of children involved in organised cricket were non-regular participants (56.0%).
- The vast majority of annual organised cricket participants were boys (94.2%)*.
- 71.1% of annual organised cricket participants were aged 9 years or older*.

*As the ABS did not report the survey sample sizes for the demographic (e.g. age or gender) categories it was not possible to conduct a significance test on the demographic subgroups

**Based on the 2012 ABS population estimate for Australian 5-14 year olds

2003 – 2012 Participation by Frequency

Interpretive Notes

Between 2003 and 2012, the ABS estimation of the number of children annually participating in organised cricket varied around 133,000 (in 2012) and 155,000 (in 2009).

Between 2003 and 2012, the ABS estimation of the percentage of Australian children annually participating in organised cricket varied between 4.8% (in 2012) and 5.8% (in 2006).

Between 2003 and 2012, there was a significant decrease in the regular participation rate for children's organised cricket. There was, however, no significant change in the annual and non-regular participation rates.

In 2003 and 2006 the regular participation rate for children's organised cricket was estimated to be higher than the non-regular participation rate. In contrast, in 2009 and 2012 the non-regular participation rate was estimated to be higher than the regular participation rate.

Note: A two sample Difference in Proportions T-Test at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating across the four time periods. A one sample Difference in Proportions T-Test at 95% confidence level was used to compare regular and non-regular participation rates.

Annual Participation Demographic Analysis

Annual Participation by Gender

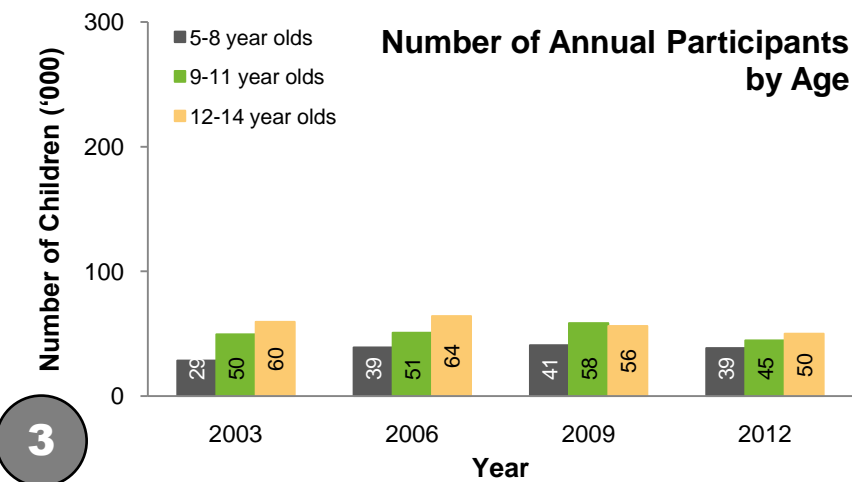

Interpretive Notes

The data presented on this slide appears to indicate the following:

- More boys than girls participated in organised cricket at least once a year.
- Annual participation by girls in organised cricket (rate and number) was steady over the years.
- The number of boys participating annually in organised cricket was similar in 2003 and 2012, yet the annual participation rate decreased across this same period. This is because the Australian population for 5-14 year old boys grew over the years whereas the number of boys participating in organised cricket annually did not.

Annual Participation by Age

Interpretive Notes

The data presented on this slide appears to indicate the following:

- The annual participation rate for each age group participating in organised cricket became more closely aligned over the years.
- For each of the four time periods, the number of 9-11 year olds and 12-14 year olds participating annually in organised cricket was greater than the number of participants from the 5-8 year old age category.

Regular Participation Demographic Analysis

Regular Participation by Gender

Interpretive Notes

The data presented on this slide appears to indicate the following:

- The regular participation rate for organised cricket decreased from 2006 to 2012, and this was primarily related to a decrease in regular participation by boys.
- The proportion of boys to girls participating regularly in organised cricket was similar to the gender ratios for annual organised cricket participation.
- The number of boys participating in regular cricket was highest in 2006. The number of boys participating regularly decreased steadily from 2006 to 2012.

Regular Participation by Age

Interpretive Notes

The data presented on this slide appears to indicate the following:

- The age demographic for regular participants in organised cricket was older than the age demographic for annual participants. Across all four time periods, over 85% of regular cricket participants were aged 9 or older.

Sport Comparison

Ranking of Selected Sports According to Annual Participation

2012 Ranking	SPORT	2003 Ranking	↑ ↓
1	Swimming	1	-
2	Football	2	-
3	Australian Football	6	↑ 3
4	Netball	3	↓ 1
5	Basketball	5	-
6	Tennis	4	↓ 2
7	Gymnastics	9	↑ 2
8	Cricket	7	↓ 1
9	Rugby League	10	↑ 1
10	Track and Field Athletics	8	↓ 2
11	Rugby Union	14	↑ 3

2012 Ranking	SPORT	2003 Ranking	↑ ↓
12	Touch Football	13	↑ 1
13	Hockey	11	↓ 2
14	Softball	12	↓ 2
15	Surf Lifesaving	16	↑ 1
16	Horse activities	15	↓ 1
17	Golf	17	-
18	Baseball	18	-
19	Volleyball	19	-
20	Surf sports	21	↑ 1
21	Cycling	20	↓ 1

The Table represents a ranking of 21 selected sports

Table sorted on 2012 rankings

#1 ranking = sport with the highest participation among the 21 selected sports

2012 Annual v. Regular v. Non-regular Participation Rates for Selected Sports

Note: A one sample Difference in Proportions T-Test at 95% confidence level was used to compare regular and non-regular participation rates.

2003 v. 2012 Annual Participation Rates for Selected Sports

Annual defined as participating in a given sport at least once a year
 NB. Sports are sorted on 2012 annual participation rates in descending order

Note: A two sample Difference in Proportions T-Tests at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating in 2003 and 2012.

2003 v. 2012 Regular Participation Rates for Selected Sports

Regular defined as participating in a given sport at least 27 times a year
 NB. Sports are sorted on 2012 regular participation rates in descending order

Note: A two sample Difference in Proportions T-Tests at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating in 2003 and 2012.

2003 v. 2012 Non-regular Participation Rates for Selected Sports

Note: A two sample Difference in Proportions T-Tests at 95% confidence level was used to compare the percentage of Australian 5-14 year olds participating in 2003 and 2012.
